EDUCATION

Thapar Institute of Engineering and Technology

2023 – 2027

B.E. in Computer Engineering

- Relevant Coursework: Foundations of Data Science, Predictive Analytics Using Statistics, Data Science: CV & NLP, Database Management Systems

TECHNICAL SKILLS

Languages & Query: Python, SQL, R

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Folium, PyArrow, scikit-learn, TensorFlow

Tools: Tableau, Google BigQuery, DuckDB, Excel, Git, GitHub, Jupyter Notebook

Concepts: EDA, RFM Segmentation, Feature Engineering, Statistical Analysis, Data Cleaning, Visualization

PROJECTS

Olist E-Commerce Customer & Operations Analytics | *Python, DuckDB, Tableau* | [GitHub](#) | [Dashboard](#)

- Merged and cleaned 9 relational tables spanning 96,095 unique customers using Pandas, resolving nulls across delivery timestamps, payment values, and review scores
- Performed RFM segmentation revealing 48% of customers as “Lost” and only 2% as Loyal/Champions, directly informing a re-engagement recommendation targeting 46,000+ churned buyers
- Quantified delivery delay impact: late orders averaged 2.5/5 stars vs 4.1/5 for on-time deliveries (39% satisfaction drop), surfacing SLA enforcement as the highest-ROI operational fix
- Wrote 4 DuckDB SQL queries using window functions (LAG, RANK) to derive MoM revenue growth, AOV by state, top-10 GMV categories, and seller performance rankings
- Built a 4-view interactive Tableau Public dashboard covering RFM distribution, revenue by category, state-level order heatmap, and delay-vs-review correlation

NYC Taxi Demand & Operations Analytics | *Python, BigQuery, Folium* | [GitHub](#)

- Ingested 9.38M raw trip records (Jan–Mar 2023) via PyArrow `iter_batches()` chunked processing; applied IQR-based outlier capping on fare and distance, yielding a 540K-row clean dataset
- Identified citywide peak demand at Thursday 6 PM; BigQuery analysis revealed Saturday 1 AM surges of 260–490 trips/hour concentrated in nightlife zones (148, 79)
- Engineered a surge proxy metric via BigQuery window functions (`PERCENTILE_CONT` at 90th percentile per zone) across 3 CTEs, flagging the top 20 high-frequency surge windows
- Discovered card payments averaged a 25.2% tip rate vs \$0.00 recorded for cash trips, recommending in-app payment nudges to improve driver earnings visibility
- Generated an interactive Folium choropleth map from TLC shapefiles (EPSG:4326), visualizing pickup density and revenue concentration across all 263 NYC taxi zones

EXPERIENCE

Data Analytics Job Simulation

2025

Deloitte (Forage)

- Unified conflicting JSON telemetry streams from manufacturing machines using Python and Pandas to produce a clean, analysis-ready dataset
- Built an interactive Tableau dashboard visualizing factory failure rates and machine downtime trends to support predictive maintenance decisions
- Analyzed raw web server logs to detect anomalous automated login patterns and isolate a suspected breach IP address
- Conducted gender pay equity analysis using Excel PivotTables and XLOOKUP across roles and departments, quantifying salary disparities by division

Virsa Society, Thapar Institute

2023 – 2025

Technical Head (Core Member, 2023–2024)

- Approached 30+ local vendors for Virsa Mela, converting 20 into confirmed sponsors for an event of 4,000+ attendees; rebuilt the society website (ssavirsa.in) from static HTML/CSS to React

CERTIFICATIONS

Coursera: Mastering Data Analysis with Pandas (5-Part Learning Path), Statistics for Data Science, Working with BigQuery, Business Analysis & Process Management, NVIDIA: Fundamentals of Deep Learning, Generative AI: Foundation Models and Platforms, Exploratory Data Analysis with Python and Pandas
